1. CDC Guidelines: 6 feet of separation between any two persons.

2. Estimate Social Distancing Area per person as 6’ x 6’ = 36 square feet.

3. Calculate surface area of the room. Example: 720 square feet.

4. Divide by 36 to find room capacity/number of persons. Example: 20 people.

5. In spaces where students congregate (classrooms, common spaces, cafeterias, etc.) subtract approximately 25% and round down. Example: 15 people.
